

Polishing and deburring machine PEM

KBM

KBM Maschinenbau

Polishing and deburring machine

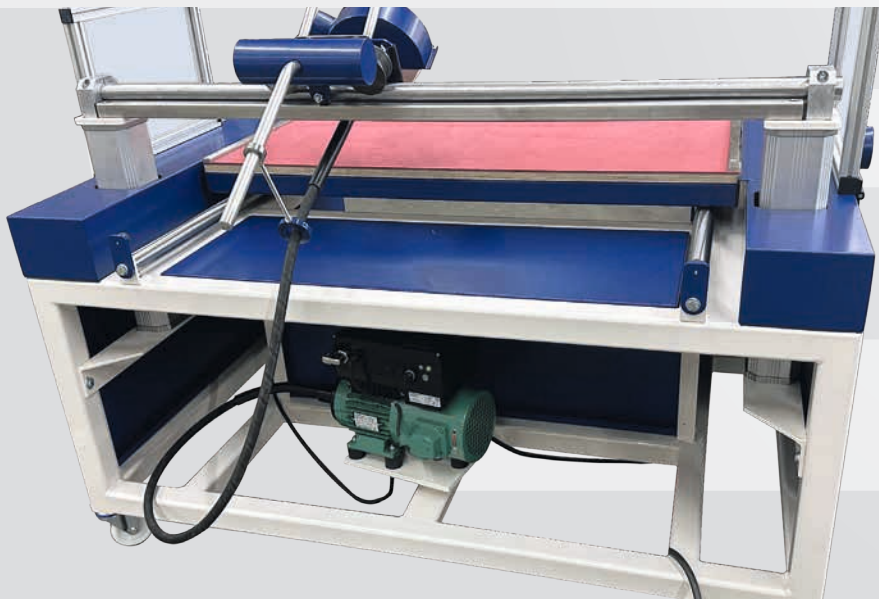

Multifunctional machine for polishing, satin finishing, grinding and deburring different workpieces, e.g. profiles, housings, sheets and much more.

The tool is driven by a flexible shaft. Quick and easy changing of the handpiece (straight or angled version).

The table is equipped with an anti-slip mat, which keeps the workpiece secure and the surface protected.

The unit is mounted in a play-free roller guide to enable effortless and guided work. The drive unit is located in the lower machine area.

Different tools can be used for different processing.

The machine has a drive power of 2.8 kW with a continuously variable speed range of 900 - 15,000 rpm.

With the manual height adjustment, using two lifting columns, the working height can be adjusted from 0 - 200 mm.

All illustrations may show special accessories which are available at extra cost.

Last revised 01/2024

The machine is mounted on four swivel castors and can therefore be moved around the workplace at any time.
